

KIP 800 COLOUR SERIES

Technology Highlights

800 COLOUR SERIES

TECHNOLOGY HIGHLIGHTS

- Superior Image Quality
- Expanded Range of Media
- Increased Productivity
- Technical Control
- Superior Design Construction

Superior Image Quality:

- Process Unit Phase Control precisely synchronises photoconductor rotation for accurate colour registration
- Imaging Transfer Belt technologies removes media as a variable in image registration
- KIP 800 technology increases the duty cycle of maintenance parts reducing operation costs and technical service visits

Increased Productivity:

- KIP 800 Quick Switch Technology
 - For fast print production of mixed colour and black & white print sets
 - Eliminates roll switching delays, providing increased productivity with mixed size print sets in Colour and B&W
- The toner replenishment system returns the system to printing immediately after the new toner cartridge is installed
- A very short and simple paper path with multiple print stacking and folder options
- KIP System K System software enhances the user experiences throughout the diverse KIP applications and drivers along with modern tablet like printer functions and controls.

Superior Design Construction:

- High capacity synchronised motors with a 5 year guarantee
- Welded, steel frame with bearing rail construction for media decks
- Drive trains include roller/thrust bearings with spur and helical gears to precisely distribute mechanical loads
- Less than 1% contact duration of media detachment guides for extended life of fuser system

Expanded Range of Media:

- Environment: Expanded Relative Humidity range 15% to 80% and Temperature range of 10 to 30 degrees Celsius (50 to 86 degrees Fahrenheit)
- Straight line condensed media path with tension sensor for accurate media control during the printing process
- System K Media Management allows unlimited operator control of project/job identification linked to specific media types
- Media size print length:
Standard setting: 8 ½" (210 mm) to 20' (6 meters)
Expanded setting: 210' (64 meters)
- Front stacking for a compact footprint and rear stacking for higher productivity

Technical Control:

- KIP 800 Series integrated touch screen Technical Interface using "tablet like" control provides easy access to functions such as:
 - Auto Adjustments
 - Program Updates
 - Printer Status reducing the duration of onsite support and improving productivity
- Compact mechanical design with ease of serviceability as an engineering priority
- Automatic focus adjustments, to simplify the install and maintenance procedures
- Easy slide out process units for fast access to all standard maintenance and part replacement procedures.
- System access through standard door frames without lifting or tilting. System casters provide easy maneuverability.
